Dear Ms Olphert,

Re: Support for the Proposed Brishey Wind Farm (Planning Ref: LA01/2023/0008/F)

I'm writing to show my support for the Brishey Wind Farm proposal.

I understand that planning officials have already recommended the application for approval, which shows it meets the necessary planning policies and guidelines.

Aside from the environmental benefits, the wind farm would bring real economic value to the local community. It could mean more jobs, more investment, and new opportunities for farmers and small businesses—especially in rural areas where those chances don't come around often.

I'm also glad to see a community benefit fund included. Local groups and charities are under a lot of pressure these days, and extra support like this could make a big difference.

On top of that, the development will generate rateable income for the council. With ratepayers' bills often increasing, any extra revenue that helps ease the pressure on households and businesses is very welcome.

This is a relatively small, four turbine, proposal which has already been reduced in scale in response to community feedback. The removal of two turbines means any views of the wind farm from Dungiven are no more than glimpses. The reduction also means the setting of Benbradagh is protected. Those points aside, the wind farm is being brought forward as an extension to an existing wind farm already in place.

I believe this is a reasonable and measured approach to delivering the renewable energy needed to meet the Climate Change Act target of at least 80% renewable electricity by 2030, and shows a clear willingness to listen to local feedback.

All in all, I hope the planning department and Committee will give this application the fair and timely consideration it deserves and move forward with approval.

Yours sincerely,

On top of that, the development will generate rateable income for the council. With ratepayers' bills often increasing, any extra revenue that helps ease the pressure on households and businesses is very welcome.

This is a relatively small, four turbine, proposal which has already been reduced in scale in response to community feedback. The removal of two turbines means any views of the wind farm from Dungiven are no more than glimpses. The reduction also means the setting of Benbradagh is protected. Those points aside, the wind farm is being brought forward as an extension to an existing wind farm already in place.

I believe this is a reasonable and measured approach to delivering the renewable energy needed to meet the Climate Change Act target of at least 80% renewable electricity by 2030, and shows a clear willingness to listen to local feedback.

All in all, I hope the planning department and Committee will give this application the fair and timely consideration it deserves and move forward with approval.

Yours sincerely,

Dear Ms Olphert,

Re: Support for the Proposed Brishey Wind Farm (Planning Ref: LA01/2023/0008/F)

I'm writing to show my support for the Brishey Wind Farm proposal.

I understand that planning officials have already recommended the application for approval, which shows it meets the necessary planning policies and guidelines.

Aside from the environmental benefits, the wind farm would bring real economic value to the local community. It could mean more jobs, more investment, and new opportunities for farmers and small businesses—especially in rural areas where those chances don't come around often.

I'm also glad to see a community benefit fund included. Local groups and charities are under a lot of pressure these days, and extra support like this could make a big difference.

On top of that, the development will generate rateable income for the council. With ratepayers' bills often increasing, any extra revenue that helps ease the pressure on households and businesses is very welcome.

This is a relatively small, four turbine, proposal which has already been reduced in scale in response to community feedback. The removal of two turbines means any views of the wind farm from Dungiven are no more than glimpses. The reduction also means the setting of Benbradagh is protected. I understand that planning officials have already recommended the application for approval, which shows it meets the necessary planning policies and guidelines.

Aside from the environmental benefits, the wind farm would bring real economic value to the local community. It could mean more jobs, more investment, and new opportunities for farmers and small businesses—especially in rural areas where those chances don't come around often.

I'm also glad to see a community benefit fund included. Local groups and charities are under a lot of pressure these days, and extra support like this could make a big difference.

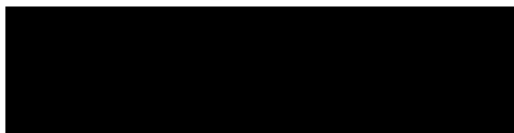

On top of that, the development will generate rateable income for the council. With ratepayers' bills often increasing, any extra revenue that helps ease the pressure on households and businesses is very welcome.

This is a relatively small, four turbine, proposal which has already been reduced in scale in response to community feedback. The removal of two turbines means any views of the wind farm from Dungiven are no more than glimpses. The reduction also means the setting of Benbradagh is protected. Those points aside, the wind farm is being brought forward as an extension to an existing wind farm already in place.

I believe this is a reasonable and measured approach to delivering the renewable energy needed to meet the Climate Change Act target of at least 80% renewable electricity by 2030, and shows a clear willingness to listen to local feedback.

All in all, I hope the planning department and Committee will give this application the fair and timely consideration it deserves and move forward with approval.

Yours sincerely,

October 2025

Dear Ms Olphert,

Re: Support for the Proposed Brishey Wind Farm (Planning Ref: LA01/2023/0008/F)

I'm writing to show my support for the Brishey Wind Farm proposal.

I understand that planning officials have already recommended the application for approval, which shows it meets the necessary planning policies and guidelines.

Aside from the environmental benefits, the wind farm would bring real economic value to the local community. It could mean more jobs, more investment, and new opportunities for farmers and small businesses—especially in rural areas where those chances don't come around often.

I'm also glad to see a community benefit fund included. Local groups and charities are under a lot of pressure these days, and extra support like this could make a big difference.

On top of that, the development will generate rateable income for the council. With ratepayers' bills often increasing, any extra revenue that helps ease the pressure on households and businesses is very welcome.

This is a relatively small, four turbine, proposal which has already been reduced in scale in response to community feedback. The removal of two turbines means any views of the wind farm from Dungiven are no more than glimpses. The reduction also means the setting of Benbradagh is protected. Those points aside, the wind farm is being brought forward as an extension to an existing wind farm already in place.

I believe this is a reasonable and measured approach to delivering the renewable energy needed to meet the Climate Change Act target of at least 80% renewable electricity by 2030, and shows a clear willingness to listen to local feedback.

All in all, I hope the planning department and Committee will give this application the fair and timely consideration it deserves and move forward with approval.

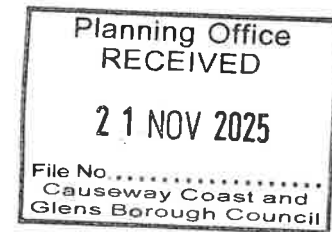

Yours sincerely,

This is a relatively small, four turbine, proposal which has already been reduced in scale in response to community feedback. The removal of two turbines means any views of the wind farm from Dungiven are no more than glimpses. The reduction also means the setting of Benbradagh is protected. Those points aside, the wind farm is being brought forward as an extension to an existing wind farm already in place.

I believe this is a reasonable and measured approach to delivering the renewable energy needed to meet the Climate Change Act target of at least 80% renewable electricity by 2030, and shows a clear willingness to listen to local feedback.

All in all, I hope the planning department and Committee will give this application the fair and timely consideration it deserves and move forward with approval.

Yours sincerely,

Dear Ms Olphert,

Re: Support for the Proposed Brishey Wind Farm (Planning Ref: LA01/2023/0008/F)

I'm writing to show my support for the Brishey Wind Farm proposal.

I understand that planning officials have already recommended the application for approval, which shows it meets the necessary planning policies and guidelines.

Aside from the environmental benefits, the wind farm would bring real economic value to the local community. It could mean more jobs, more investment, and new opportunities for farmers and small businesses—especially in rural areas where those chances don't come around often.

I'm also glad to see a community benefit fund included. Local groups and charities are under a lot of pressure these days, and extra support like this could make a big difference.

On top of that, the development will generate rateable income for the council. With ratepayers' bills often increasing, any extra revenue that helps ease the pressure on households and businesses is very welcome.

This is a relatively small, four turbine, proposal which has already been reduced in scale in response to community feedback. The removal of two turbines means any views of the wind farm from Dungiven are no more than glimpses. The reduction also means the setting of Benbradagh is protected. Those points aside, the wind farm is being brought forward as an extension to an existing wind farm already in place.

I believe this is a reasonable and measured approach to delivering the renewable energy needed to meet the Climate Change Act target of at least 80% renewable electricity by 2030, and shows a clear willingness to listen to local feedback.

Aside from the environmental benefits, the wind farm would bring real economic value to the local community. It could mean more jobs, more investment, and new opportunities for farmers and small businesses—especially in rural areas where those chances don't come around often.

I'm also glad to see a community benefit fund included. Local groups and charities are under a lot of pressure these days, and extra support like this could make a big difference.

On top of that, the development will generate rateable income for the council. With ratepayers' bills often increasing, any extra revenue that helps ease the pressure on households and businesses is very welcome.

This is a relatively small, four turbine, proposal which has already been reduced in scale in response to community feedback. The removal of two turbines means any views of the wind farm from Dungiven are no more than glimpses. The reduction also means the setting of Benbradagh is protected. Those points aside, the wind farm is being brought forward as an extension to an existing wind farm already in place.

I believe this is a reasonable and measured approach to delivering the renewable energy needed to meet the Climate Change Act target of at least 80% renewable electricity by 2030, and shows a clear willingness to listen to local feedback.

All in all, I hope the planning department and Committee will give this application the fair and timely consideration it deserves and move forward with approval.

Yours sincerely,
